

TransGOLF[®], Inc.

SOIL INOCULANT PROGRAM

1 (One) Acre

“The Best Fungicide Program is a Good Nutritional Program”

Products:

2 (two) gallons MicroBac

1 (one) 2-lb container Corn Glucose

1 (one) gallon Liquid Humate

2 (two) gallons SOS Biological

1 (one) gallon Black Sea Kelp

Instructions for Use:

- Mix the products in tank at time of spraying.
- Water-in for a few minutes in the morning for best results.
- Maintain tank solution pH between 5.8-7.1
- Do NOT apply Gypsum over top of SIP.
- Try to avoid DMI fungicides as much as possible, at least around SIP application.
- ExAlt may enhance this application.

Testimonial

“I was dubious of TransGOLF's "Soil Inoculant Program". Dubious enough to order plenty of fungicide for a curative spray program. After the two prescribed applications, we waited for the Fairy Ring to make its yearly appearance. Well, almost a year later we are still waiting. We will soon be making another application of the "Soil Inoculant Program". The only difference is that this year we won't have to order the fungicide. It's still in the shed. Taking care of the soil paid off with great turf and some savings in the chemical budget.”
